**DETAILED ACTION**

***Location of Application***

1. The Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Art Unit 1634.

8/15/02 

***Election/Restriction***

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I Claim 10-<sup>14</sup>~~15~~, drawn to a mutant of a naturally occurring second serine/threonine protein or tyrosine protein kinase, classified in class 435, subclass 194.
- II Claims 15-17, drawn to a crystallizable co-complex of a mutant protein second kinase and an inhibitor, classified in class 435, subclass 194.
- III. Claims 18-22, drawn to a method for determining whether a test compound binds to a mutant second serine/threonine protein kinase or a mutant second tyrosine protein kinase, classified in class 435, subclass 7.1.

3. The inventions are distinct, each from the other because of the following reasons:

Groups I and II are distinct and independent inventions in that they are directed to different products which have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). As a result, different and distinct searches will have to be performed. For example, the search required for Group II such as an inhibitor of said first kinase in claim 15 is not required for Group I.

Art Unit: 1634

Group I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product such as testing whether mutant kinase can phosphorylate a protein.

Groups II and III are distinct and independent inventions in that they are directed to a product and a unrelated method which have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). As a result, different and distinct searches will have to be performed. For example, the search required for Group II such as an inhibitor of said first kinase in claim 15 is not required for Group III.

4. Sequence Election Requirement Applicable to Group III

Groups I, II, and III contain SEQ ID Nos: 2 and 3. These sequence encoding different proteins with different amino acid sequences are structurally distinct chemical compounds and generally, are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequences are presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 *et seq.*

Applicant is advised that examination will be restricted to only elected SEQ ID NO. and should not to be construed as a species election.

Art Unit: 1634

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. This application contains claims directed to the following patentably distinct species of the claimed invention:

(1) ERK2 (claims 12, 13, 20, and 21)

(2) JNK3 (12, 14, 20, and 22)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, generic claims are claims 10, 11, and 15-19.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to

Art Unit: 1634

be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993)(See 37 CAR § 1.6(d)). The CM Fax Center number is either (703) 308-4242 or (703)305-3014.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank Lu, Ph.D., whose telephone number is (703) 305-1270. The examiner can normally be reached on Monday-Friday from 9 A.M. to 5 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, W. Gary Jones, can be reached on (703) 308-1152.
